Tomey USA launches its latest innovation in Topographers
TOMEY TMS-4N Corneal Topographer

Phoenix, Arizona –Tomey USA unveils its latest device, the TMS-4N Corneal Topographer. Tomey is a recognized leader in the eye care industry and is committed to the continual improvement of diagnostic technology in topography. The TMS-4N was developed to satisfy all expectations. Features like auto shot function, large patient data base, fourier refractive analysis and keratoconus screening make this device easy in handling as well as efficient and fast in operation. Eye care specialists will benefit, as the device is vastly more affordable than other competitive models. Tomey USA will exhibit the TMS-4N capabilities and functions at the 2014 American Academy of Ophthalmology trade show in Chicago this fall.

The TMS-4N provides ease of operation with its performance accuracy for optometrists and ophthalmologists alike with the incorporation of auto shot function which insures a perfect topography every time with no re-takes.

About Tomey: For over 40 years, Tomey has emerged as the worldwide leader in the eye care industry. Its mission is simple; deliver the highest quality of devices that are dually cost affordable and easily operable. With its incorporation of modern touch screen technology and comprehensive software, Tomey's entire line of ophthalmic and optometric diagnostic instruments is designed to be efficient and offer effortless user interaction. With seasoned expertise and success in the corneal topographic market, Tomey has managed to extend beyond topography as it offers a line of Auto Lensmeters, Auto Refractors, Auto Refractor Keratometers, and Ultrasound systems all utilizing the same initiative for optimum accuracy and operation in patient care and practice. For more information about Tomey products contact TomeyUSA, 2630 E. Mohawk Lane, Suite 136, Phoenix Arizona 85050, or by phone at (888) 449-4045 or visit online at www.tomeyusa.com.
